

Cepsa professionals participate in the education of the students of the Master of Engineering and Environment at the University of Huelva

- **Around 20 professionals put their knowledge at the service of formal university education throughout the academic year**
- **This action is part of the company's commitment to society and SDG 4 "Quality education"**
- **The Master's Degree in Chemical Engineering of the UHU and the UNIA and the Master's Degree in Environmental Technology have Cepsa technicians among their teaching staff**
- **Education with classes at the La Rábida Energy Park facilities are part of these collaborations**

Dozens of engineers, environmental science graduates, and qualified professionals from Cepsa voluntarily provide education to students from the University of Huelva and the UNIA throughout the course. These classes are out of the students' routine and are designed to provide them with a different vision from the purely academic one throughout the year.

The master's degree in Chemical Engineering of the University of Huelva and the UNIA has a large group of professors from Cepsa, including the director of the La Rábida Energy Park, Jorge Acitores, and the head of quality and continuous improvement, Rebeca García.

For the University's master's degree in chemical engineering, Cepsa professionals will give 18 classes on subjects such as "fluid dynamic simulation," "integrated management and sustainability of chemical processes" and "R&D&I management in chemical engineering."

Cepsa is also present in the master's degree in environmental technology, with the participation of Francisco Serrano, an engineer from the Energy Park's environmental protection unit. The students of this master's degree take one of their classes in person at Cepsa's own facilities in La Rábida.

For Rebeca García, who this week welcomed the students of the Chemical Engineering Master's program at the La Rábida Energy Park, "bringing the students to Cepsa is positive for them and for us. For them, because it gives them something different as they can see our equipment up close, and for us, it is important to be in contact with them, as they will be our future as a company."

These relations between Cepsa and the educational environment in Huelva are long-standing, and little by little they are growing. The Fundación Cepsa Chair, the Dual Vocational Training students who pass through the company's facilities, the Fundación Cepsa scholarships for Vocational Training and the internship students of various degrees such as Labor Relations, Engineering and Communication are some of the actions which Cepsa uses to contribute to the education of students in the province of Huelva.

Cepsa is a leading international company committed to sustainable mobility and energy with a solid technical experience after more than 90 years of activity. The company also has a world-leading chemicals business with increasingly sustainable operations.

In 2022, Cepsa presented its new strategic plan for 2030, Positive Motion, which projects its ambition to be a leader in sustainable mobility, biofuels, and green hydrogen in Spain and Portugal, and to become a benchmark in the energy transition. The company places customers at the heart of its business and will work with them to help them advance their decarbonization objectives.

ESG criteria inspire everything Cepsa does as it advances toward its Net Positive objective. This decade, it will reduce its Scope 1 and 2 CO₂ emissions by 55% and its Scope 3 emissions by 15 to 20%, with the objective of reaching net zero emissions by 2050.
